

Refrigeration and sterilisation combined

Italian company Teco, a leading manufacturer of refrigerators and conditioners for aquariums, anticipates the future with two revolutionary product lines. Thanks

to its continuous research into new technologies its "TR" refrigerators and "TC" conditioners have now also become instruments for treating the water. For the first time it has been possible to integrate a UV-C lamp inside the unit, enabling the correct water temperature to be maintained while at the same time improving the biological state of the water.

Aquarium controller

Italian company Aquatronica, which produces electronic control systems for use in water applications, has created a powerful system that permits all aquarium electrical equipment to be managed using a unique device: the aquarium controller. It has many functions, including multi-timer, temperature sensor, electronic memo and software reprogramming. As a new product for 2005 Aquatronica presents the Chemicals family, composed of various interfaces that can be connected to the system. Now three interfaces have been launched: PH-, Re-

dox- and temperature reading. The controller manages all these interfaces and displays the detected chemical value trends.

Dog toys

"Puppy Pull" is a range of extremely durable dog toys from Belgian company Flamingo. It has been designed with puppies in particular

in mind and the toys are suitable for both indoor and outdoor play. Three different designs are available. "Smiling Animals" latex figures (picture) are another new product and are sure to provide a fun game for any dog. The brightly coloured figures are non-toxic and come in many different versions.

Healthy water

"Aquasana Gold" from Italian company Prodac is a water conditioner for mini-aquariums and glass goldfish bowls that is used to neutralise the chlorine in tap water, reduce the heavy metal pollutant effects of tap water and to condition the water for the fish. It is enhanced with aloe vera, a special natural colloid which protects the scales and gills of fish. "Aquasana Gold" must be used immediately after filling the new aquarium and when some of the water is replaced as it maintains a stable pH level and is an ideal and efficient anti-

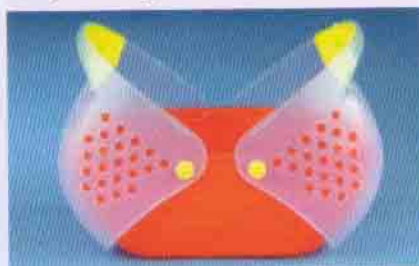

stress agent. The product is sold in small 30 ml bottles.

Perfect place for pets

The "Baggy" pet carrier for small animals is the latest product from the Italian company Imac. It offers a unique design that features

a semi-transparent "split & slide" roof with built-in handles. Its innovative looks and great choice of colours are combined with high quality materials to ensure a product that is distinctive, easy to use and comfortable for both pet and owner.

Innovative products

Two new additions to its top-selling range of "Staywell" pet products are being launched by British company Reilor. The first of the two new products is

"petPod", an automatic feeding unit. With a modern design reflected by its packaging, it utilises sophisticated and accurate digital tim-

ing technology to provide a new degree of convenience for pet owners. It is also ideal for regulating the administration of medicine, if required. The second new product is called "Eco Clean". It provides an innovative biological disposal system. A purpose-designed disposal bin housing an integrally stored scoop - both made from recycled materials - are provided for owners to collect their dog's waste and place it in the bin. With "Eco Clean" the waste is quickly converted into a highly effective, odour-free garden fertiliser.
